

LABORATORY DATA CONSULTANTS, INC.

The Leader in Data Quality Management Solutions

DATA VALIDATION SERVICES

Laboratory Data Consultants, Inc. (LDC) is a full-service data quality management contractor. From data validation services to third party auditing to litigation support services and even managing your entire QA/QC program, LDC has the proven experience and quality staff to support your environmental QA/QC needs and requirements.

WHY VALIDATE YOUR DATA?

The main objective of data validation is to provide data of known quality. Analytical and field data from environmentally impacted sites are used for many purposes including: compliance with regulatory requirements, determination of the presence, concentration, and movement of hazardous substances in the environment, potential effects upon a community, and for the disposal, treatment, or other remedial actions of hazardous materials. In some cases, the data may be used in litigation in defense of a PRP action or final site closure; therefore the data must be of known quality. In addition, many firms have contract or QAPP requirements to validate a certain percentage of their lab's data while many others do so simply as a routine component of their overall QA/QC program. Data validation is also a key component in assessing the overall usability of all data.

WHY CHOOSE LDC?

- LDC has supplied data validation services for more than 80 Army Corps sites, over 100 AFCEE (Air Force) sites, several EPA Superfund sites, over 500 commercial sites and multiple Navy CLEAN and RAC contracts.
- All validation is performed by professional chemists with hands-on experience in the methods.
- LDC has validated well over one million (1,000,000) analyses covering all aspects of environmental chemistry.
- LDC is very price competitive, giving the overall best value in the industry for the dollar. Contact us today for a quote on your project.

THIRD PARTY DATA VALIDATION SERVICES

LDC is the industry leader in third-party data validation services. In addition to the mainstream analytical methods and analytes, LDC specializes in support for emerging chemicals such as NDMA, perchlorate, and 1,2,3-Trichloropropane (123-TCP).

LDC provides third party data validation services under a strict internal and external Quality Assurance program which will assure the end user data of known and documented quality. With our data validation experience on high profile projects over the past fifteen years, LDC has developed well-documented procedures which support all facets of the data review process. This includes critical steps such as:

- Receipt and handling of data packages
- Peer review for all data validation activities
- Electronic data transfer and verification processes
- Project tracking
- Internal training programs
- Internal and external audits

No other company can beat our combination of experience, reliability and price.
